SUMMARY

I am Robben who is second-year Information Technology student at Inholland University of Applied Sciences with foundational knowledge in information technology and eager to apply my academic knowledge in a hands-on internship. To be more specific, I am enthusiastic about gaining practical experience in Artificial Intelligence, Machine Learning and Full stack Developer. On top of that, I have experience with full stack developer role by doing school practical projects. I am known for strong analytical skills, teamwork, and a proactive approach to learning.

SKILLS

Operational System and Data Structure

Microsoft
Linux
MVC Pattern (Model-View-Controller)

Programming Language and Database

C#, Java, HTML/CSS, PHP,
JavaScript, Vue.js
With SQL, NoSQL MongoDB

Communication and Interpersonal

Effective communication and Friendly [Eng & Vnm]. Ability to problem-solver, analyses and proactive approach to learning

PROJECT & EXPERIENCE

- This is an **individual project** to build the website “Travel Experience in Amsterdam” by using **HTML and CSS**. This is the link to the project: [Web Project](#)
- Built the **Someren Application by using C# and SQL database** to manage the students, teachers, and activities in the Someren trip with 2 other teammates including drawing ERD to define the entities, creating **SQL database** then connecting it to Visual Studio by BaseDAO base on MCV patterns **by C#**, develop the UI of the application. This is the link of the project: [Someren Application](#)
- Built **the restaurant system by using C# and SQL** database to manage the log based on the role of employee, orders (CURD operation), reservation (CURD operation), kitchen and bar view(CURD) and bill with 2 other teammates including drawing ERD to define the entities, create SQL database then connect it to Visual Studio by BaseDAO base on MCV patterns, develop the UI of the application base on Employee Role. This is the link to the project: [Restaurant Application System](#), This is the link to UI design: [The UI of Restaurant Application](#)
- This is an **individual project** to build **The Theater Application by using Java** to manage login based on the Role of employees, reservation (CURD operation), and Film(CURD operation). This is the link to the project: [Theater Application](#), this is a requirement of Theater: [Requirement](#)

- Build the **incident management system for Garden Group Franchisee** by implementing **Java with NoSQL MongoDB database** including Login based on the role of Employee, Tickets (CURD operation based on role), and Employee (CURD based on role). First of all, the Logical Model and MongoDB database need to be created then programming will be implemented in IntelliJ based on the MVC pattern. This is the link to the project: [Incident Management System](#), this is the requirement: [Requirement](#)
- **Building the website for Nail Salon: building website by using PHP, JavaScript, Html & CSS, MySQL and RestAPI, Docker** building a website for customers, Nail-Technician, and Admin where customers can create, read, update and delete their appointments. Nail technicians can see appointments which are assigned to their ID and they can edit manually their availability. Admin can perform the CURD for appointments, services and technician. This is the link of the project: [Website-Application-End-Project](#)
- **Building the Haarlem Festival Website:** team members including 4 people who worked as Full Stack Developer were developing the website from scratch including develop the UX/UI. Besides that we also needed to make Entity Relationship database(ERD), made MySQL Database ourself and develop a website about the Haarlem Festival involving an introduction to Haarlem and its festival by **PHP, JavaScript, Html & CSS, MySQL , Rest API , Docker**. This is the GitHub project: [Haarlem Festival Website Project](#).
- **Developing the Job Search Portal Website:** developing website Using Back End includes PHP with **MVC pattern(Model, Controller, Route), using Restful API, MySQL and Docker**. Besides that **The Vue.js, JavaScript and HTML&CSS** were implemented for the Front-end. The Website intended to help people find Job reference IT. This is the GitHub project: [Job_Search_Portal](#)

EDUCATION

Inholland University of Applied Sciences | Bachelor of Information Technology

Haarlem Overveen

- Earning “**Propedeuse**” **Diploma** at the First Year
- Achieve a **25% Scholarship** from the Inholland Knowledge Grant
